

Sales Performance Dashboard – Insights Report

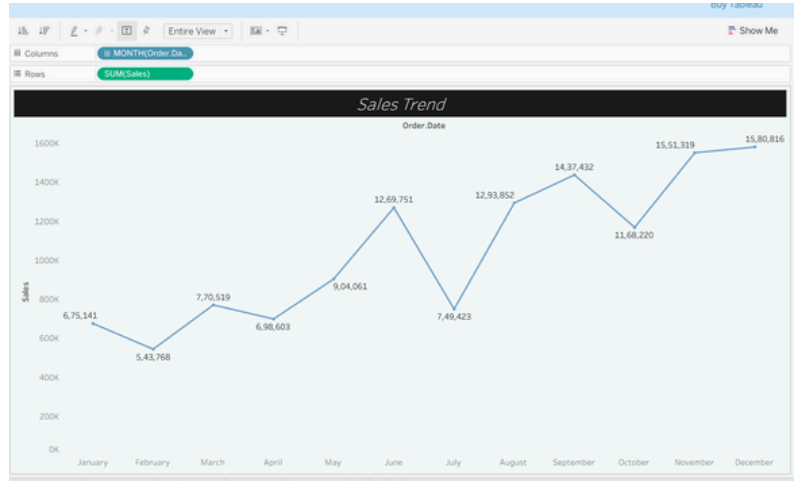

Project Overview

This project analyzes sales performance using Tableau, focusing on key business metrics such as sales trends, profitability, customer behavior, and regional performance. The dashboard enables stakeholders to make data-driven decisions by identifying patterns and opportunities for growth.

Key Insights

1. Sales Trend Analysis

- Sales show overall upward growth across the year, indicating business expansion.
- A noticeable dip in February and July suggests seasonal or operational challenges.
- Peak sales observed in November and December.
- Recommendation: Focus marketing and inventory strategies around peak months.

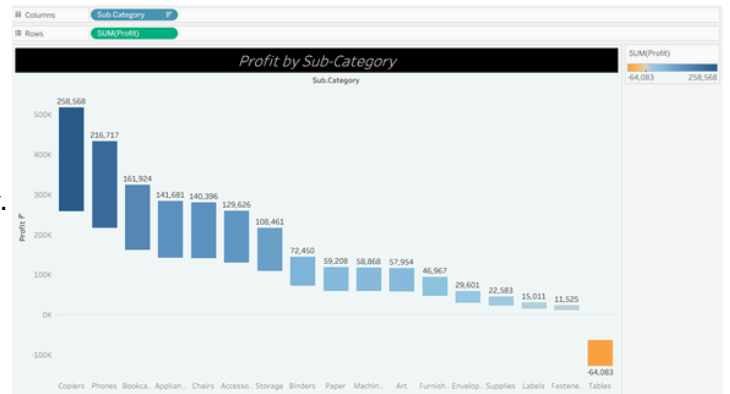

2. Profit by Sub-Category

- Copiers and Phones generate the highest profit.
- Tables show negative profit, indicating losses.
- Categories like Binders and Machines have low profitability.

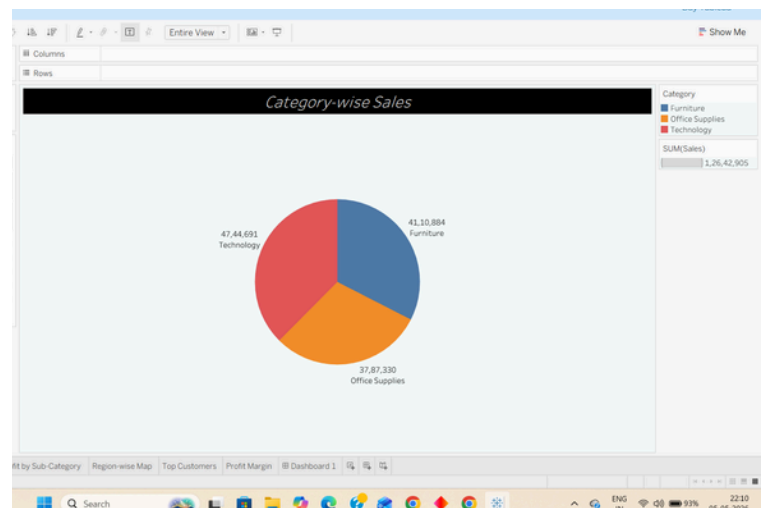

Insight:

- Revise pricing or reduce costs in loss-making categories.
- Promote high-performing categories.

3. Category-wise Sales Distribution

- Technology leads in total sales, followed by Furniture and Office Supplies. Insight:
- Invest more in technology products and marketing.
- Improve performance in furniture category.

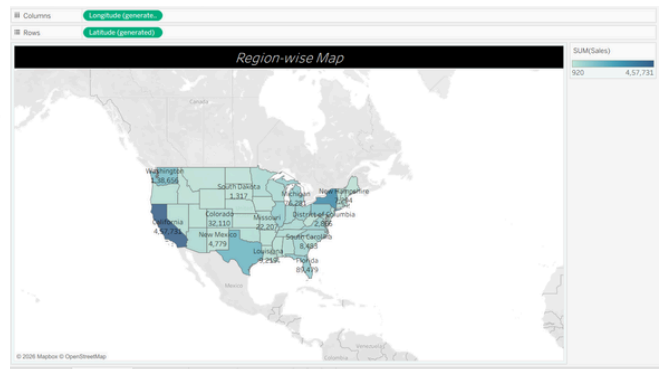

4. Regional Performance

- Sales are concentrated in states like California and Washington.
- Some regions show low contribution.

Insight:

- Expand marketing in low-performing regions.

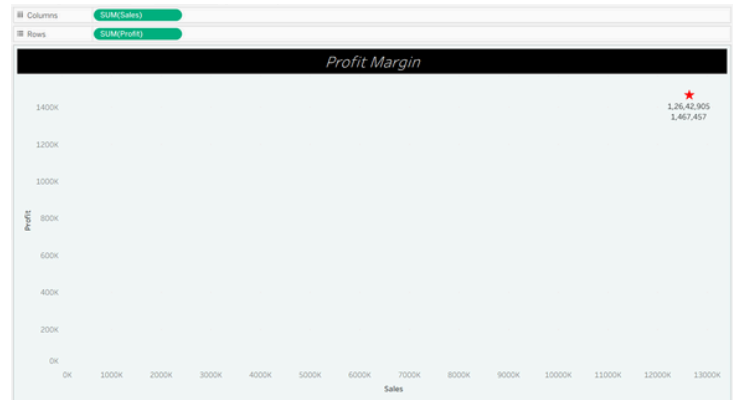

5. Profit vs Sales (Profit Margin)

- High sales do not always mean high profit.

Insight:

- Optimize pricing and cost strategies.

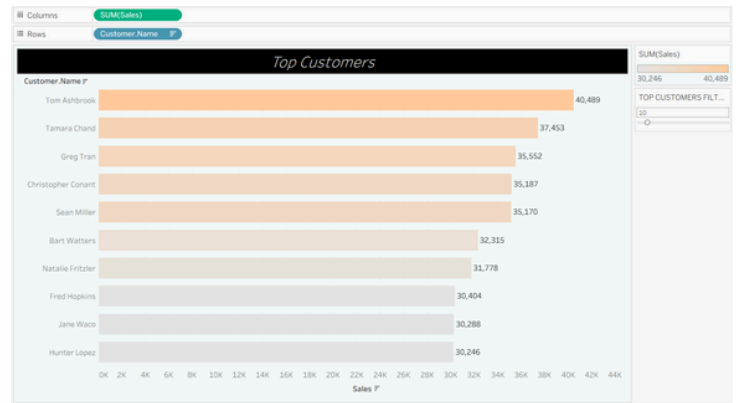

6. Top Customers Analysis

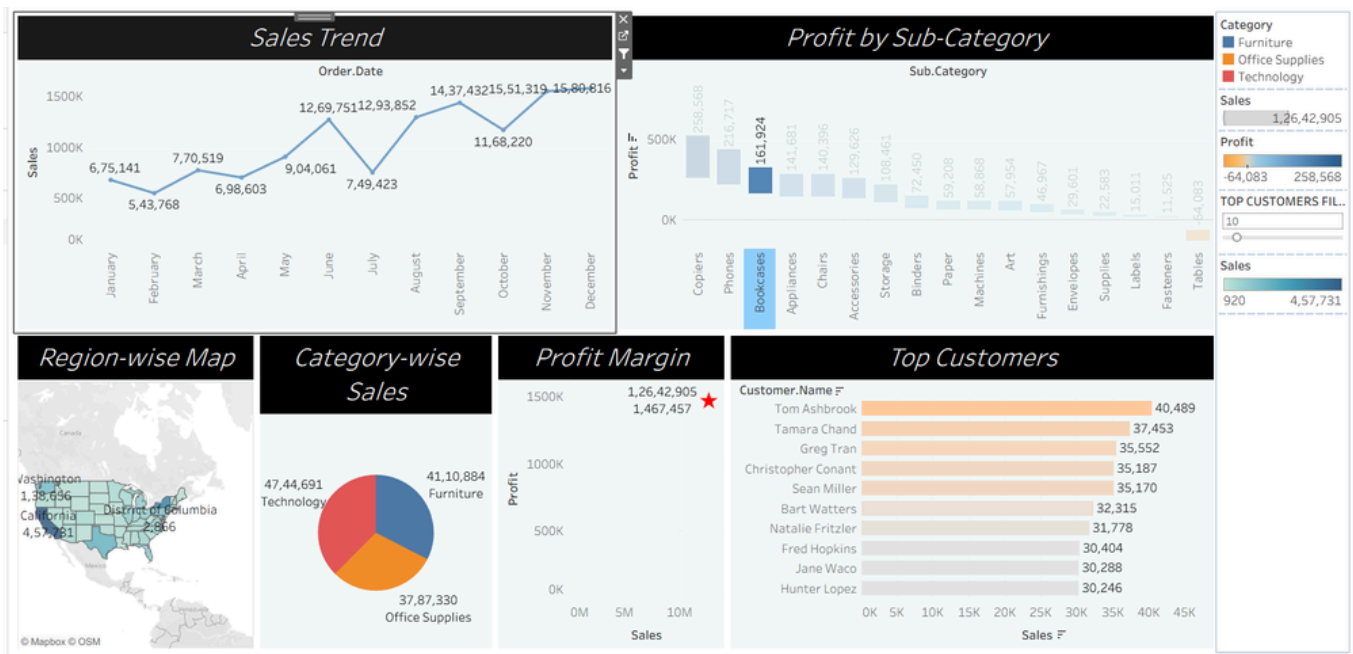

- Top customers contribute significantly to revenue.

Insight:

- Focus on customer retention and loyalty programs.

Dashboard

Business Problems Identified

- Losses in some sub-categories
 - Uneven regional sales
